WORK AUTHORIZATION

- US Citizen

EDUCATION

- **Bachelor of Technology (B.Tech)** — *Computer Science and Engineering* October 2022 – May 2026
Cochin University of Science and Technology, School of Engineering

SKILLS

- **Languages:** Python, Go, TypeScript, JavaScript, Java, C++, C#
- **Frameworks & Tools:** React.js, Next.js, FastAPI, Node.js, Express.js, Quarkus, n8n, Docusaurus
- **Databases:** PostgreSQL, MySQL, MongoDB Atlas
- **AI/ML:** RAG pipelines, Agentic AI, LLM fine-tuning, OpenCV, Vector Embeddings
- **Cloud & Infra:** AWS (S3, CloudFront), New Relic APM, Docker, Linux, Elastic Search, Kibana

EXPERIENCE

- **Software Engineer | Salescode - Thrissur, India (On-Site)** January 2026 – Present
 - Owned end-to-end design and delivery of the sales-returns pipeline (200+ commits, 100+ Flyway migrations) in Java/Quarkus on PostgreSQL — covering return validation, tax-compliance logic tied to an annual filing deadline, and credit-note issuance on a multi-tenant SaaS platform serving FMCG distributors.
 - Built logic to manage shared-inventory conflicts between free and paid stock and to recalculate promotional discounts when pricing changes mid-transaction — both cases where a wrong calculation causes direct financial loss or a compliance violation
 - Backed the pipeline with 100+ integration tests covering compliance and financial-calculation edge cases
 - Architected an LLM-powered agentic API assistant (Next.js/TypeScript, n8n, OpenAI) that fetches API documentation via a docs-RAG endpoint, uses an LLM to plan required endpoint calls/parameters from conversation history, and routes each request to either direct API execution or auto-creates n8n workflows depending on whether it involves scheduling, conditional logic, or external tools (email/Slack).
 - Created a self-healing audit pipeline that monitors audit-logs, creates LLM-driven patches for failures, auto-raises Jira tickets for non-recoverable failures, and triggers pull request generation for bug fixes — accelerating resolution by 35%.
- **Software Engineer Intern | KDex Global - North Carolina, USA (On-Site)** May 2025 – July 2025
 - Built and shipped a developer documentation platform (React, Docusaurus, AWS S3, CloudFront), reducing new-developer onboarding time by 40% and enabling self-serve support at scale
- **Software Developer Intern | Global Health Opinion - Kochi, Kerala, India (Remote)** March 2025 – May 2025
 - Built real-time clinical operational dashboards in Next.js + TypeScript with REST API integration, deployed across 3 departments and actively used by 20+ physicians to monitor patient workflows.

PROJECTS

- **AI Study Buddy — Multimodal Learning & Wellness Companion** February 2025 GitHub
 - Built a full-stack AI learning platform that converts PDFs into adaptive, level-based summaries, story explanations, mnemonics, and TTS audio, using GPT-4o and a FastAPI backend
 - Integrated OpenAI Assistants with a vector store for personalized Q&A over user-uploaded content, plus a real-time voice agent (OpenAI Realtime API) for live conversational audio/text sessions
 - Designed sentiment/wellness tracking that scores user mood from chat interactions and surfaces trends via a Next.js analytics dashboard
- **AI Financial Research Agent — Multi-Agent System** September 2025 GitHub
 - Built a multi-agent research pipeline (Planner → parallel Search agents → Financial/Risk analysis agents → Writer → Verifier) that decomposes a financial query, runs 5–15 web searches concurrently and synthesizes a validated markdown report
 - Used Pydantic models for structured, type-safe data hand-off between agents, and added a Verifier agent plus OpenAI tracing to catch unsupported claims and monitor pipeline quality in real time

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02)
- IBM Full Stack Developer Professional Certificate

ACHIEVEMENTS

- **World Rank #18 — European Rover Challenge 2024 (Krakow, Poland)** — Led the Navigation & Communications subsystem for a 400+ team international field at **AGH University, Poland**
- **Semi-Finalist — HackMIT 2024 (MIT, Massachusetts, USA)** — Ranked in top 8% of 1000+ international teams
- **Top 5 State-Level Finalist — TinkHack 2.0 (Kerala's Largest GenAI Hackathon)**, special recognition at Vibhava Tech Summit (2025)
